# MicroMega K-Files

K-Files may be used for manual root canal treatments, as well as for mechanized ones, as valuable supplement to NiTi files to achieve the scouting of the root canal with K-Files before the shaping step, K-Files will help doctors determine the working length, with or without the use of an electronic apex locator, also help remove the primary mechanical constraints through an enlargement action.

# MicroMega H-Files

Their steeper-angled cutting edges are best suited for vertical dentin cutting, highly efficient enlargement of the root canal and debris removal from the apex to the coronal part, especially in case of irregular canals walls. Last indication relates to removal of separated instruments.

# MicroMega K-Reamers

K-Reamers were originally used to find the canals entrances. Today they are mainly used at the end of the root canal preparation as a finisher, to eliminate residual mineral and organic tissues or to place the sealer.
