

HyFlex™ EDM

Reduced Number of Files

The use of HyFlex™ EDM files allows the reduction of the number of files. In small, straight canals the usage of the HyFlex™ OneFile can be enough. Depending on the clinical situation the number of files can be reduced or expanded. All HyFlex EDM NiTi Files should be used at 400 rpm and at a torque of up to 2.5 Ncm (25 mNm) excepted the Glidepath files which should be used with 300 rpm and at a torque of up to 1.8 Ncm (18 mNm).
